This project has been funded with support from the European Commission. This publication [communication] reflects the views only of the author, and the Commission cannot be held responsible for any use which may be made of the information contained therein.

In the future Schwabach will be dramatically changed in there means of transportation. Buses will be replaced by super fast underground trains and hover cars are in common. Instead of the usual trains there will exist modern and space saving overhead railways. All vehicle are enviomentally friendly and will safe the nature.

One of the best places to go to for relaxing, recovery and thinking is the city park with it's soothing and calming atmosphere. It's the place where you can be one with the nature since the trees and flowers surround you. In our opinion this fact won't change. The city park will always be a place for recovery and thinking, even in 20 years. Also it will probably be smaller than now since a part will be most likely destroyed for nmore buildings and a better infrastructure, e.g. even in our time there are not enough buildings for the increasing population because there's not enough space. We also think that most of the trees will be gone and there will only be a few left and that our little pond next to the pavillion will be modernized into a little fountain. The sidewalks will be made new.

In 2040 there won't be any individual properties Energy ist obtained primarily from the sun what causes that there will be less heating costs due the global warming. Because of the lack of space there will be increased roof gardens on single-family houses as well as high-rise buildings. The technological development will give normal consumers the ability to modernize their budget. At least it will be possible to control the home with the phone in the future.

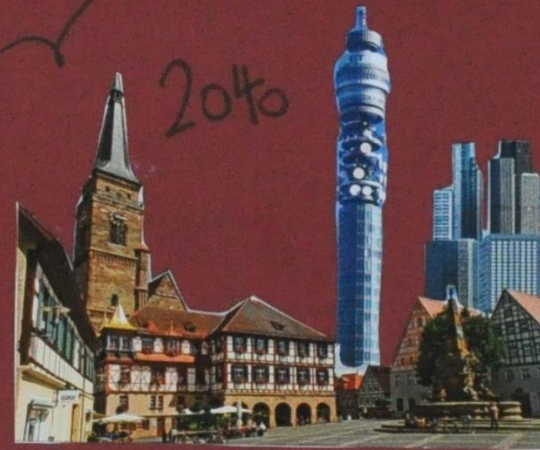

There will be big malls with many different shops and less little shops. There will also be Food drive-ins in big halls.

You order by app and the shops are specified on a few different products. Supermarkets will turn into discounters; little shops will sell high quality products. There will be big electric scoreboards, to present the products. To carry them into the shops, much money will be invested into railways, maybe under the earth, and other infrastructure.

Fruits, which must be transported quickly to the shops, will be flown by solar energy or battery powered airplanes. Maybe drones will carry little things, you ordered on the internet just into your garden. They could just be dropped out of the electric planes with little boxes.

The prices will rise for high quality products and sink for products from discounters.

SCHWABACH

Today(2015):

unemploye d people	rate of unemployment	employed people	in pimary sector	in secondary sector	in tertiary sector	average income
about 1000	about 4.7%	about 22000	about 1%	about 40%	about 59%	about 2800€

Future(2035):

unemploye d people	rate of unemployment	employed people	in primary sector	in secondary sector	in tertiary sector	average income
about 1000	about 3%	about 30000	about 0,5%	about 19,5%	about 80%	about 3500€

Furthermore more people will work at home with for example computers. Definitely more maschines for example robots will be used in jobs like nurse, construction worker or worker in factories.

# AYDIN AFTER 20 YEARS

\*Robots will help us in our homes and work places.

\*Population will increase in Aydın.

\*Historical works found in archaeological excavation will increase.

\*There will be drought and a life without water in Aydın.

\*There will be built a modern and amusing fun-fair in Atatürk City Square.

\*There will be built a developed airport in the following 20 years in Aydın.

\*The temperature will increase and there will be global warming.
